CLAIM AMENDMENTS

Please amend the claims, so that a complete set of the currently pending claims reads as follows:

1. (Original) A method of providing command execution status of a command script to an application program, comprising:
creating a return code file;
storing a return code of at least one command of a command script in the return code file; and
accessing the stored return code from an application program.
2. (Original) The method of claim 1 wherein the return code file is created by the command script.
3. (Original) The method of claim 2 further comprising verifying the existence of the return code file, prior to accessing the stored return code.
4. (Currently Amended) The method of claim 1 wherein the return code file is created by the application program.
5. (Original) The method of claim 1 further comprising prompting execution of the command script from the application program.
6. (Original) The method of claim 1 wherein the return code file comprises a file stored on a hard disk.
7. (Original) The method of claim 1 wherein the return code file comprises a file stored on a RAM disk.

8. (Currently Amended) The method of claim 1 wherein the return code file comprises a file stored in any location recognized as accessible by ~~[[the]]~~ a command processor.

9. (Original) A system of providing command execution status of a command script to an application program, comprising:

- means for creating a return code file;
- means for storing a return code of at least one command of a command script in the return code file; and
- means for accessing the stored return code from an application program.

10. (Original) The system of claim 9 further comprising means of verifying the existence of the return code file, prior to accessing the stored return code.

11. (Original) The system of claim 9 further comprising means of prompting the execution of the command script from the application program.

12. (Original) A computer readable medium storing a computer program that provides command execution status of a command script to an application program, comprising:

- computer readable code for creating a return code file;
- computer readable code for storing a return code of at least one command of a command script in the return code file; and
- computer readable code for accessing the stored return code from an application program.
